PROFESSIONAL SUMMARY

- Software Engineer with around 3.8 years of experience in building scalable web applications using **Java 8, Java 17, Spring Boot, and RESTful APIs**.
- Strong experience in designing and developing **Microservices architecture** using Spring Boot and **Spring Cloud components** such as Feign Client, Eureka (Service Discovery), API Gateway, Config Server, Circuit Breaker (Resilience4j), and Load Balancing.
- Strong experience with **Spring Data JPA and MySQL** for database design and performance tuning, along with hands-on experience in **Redis caching** and **Apache Kafka-based event-driven communication**.
- Hands-on experience in developing frontend applications using **ReactJS, HTML5, CSS3, and JavaScript**.
- Experience integrating third-party services such as **Razorpay, JavaMail API, and WATI APIs**.
- Experienced in **Log4j/SLF4J**, production-level debugging, **JUnit/Mockito** unit and integration testing, and implementing observability for microservices using **structured logging, distributed tracing, OpenTelemetry, and monitoring solutions**.
- Hands-on knowledge in **AWS services (EC2, S3, RDS, IAM)** for application deployment and cloud-based infrastructure management.
- Experience using **Docker** for containerizing applications and working with **CI/CD pipelines (Jenkins)** and **Kubernetes** for automated build and deployment processes.
- Proficient in using **Git, Swagger, Postman, and SonarQube** for version control, API testing, and maintaining code quality.
- Leveraged AI-powered development tools to enhance software development workflows, including code reviews, debugging, test automation, and technical documentation.
- Hands-on experience working across SDLC phases in an **Agile** environment.

TECHNICAL SKILLS

Backend Technologies	Java 17, Spring Framework, Spring Boot, Spring Data JPA, Spring Security, Spring Cloud, Microservices, REST APIs
Frontend Technologies	HTML5, CSS3, JavaScript (ES6), Bootstrap, ReactJS
Databases & Messaging	MySQL, Redis, Apache Kafka
Architecture & Patterns	Event-Driven Architecture, API Gateway, Service Discovery, Circuit Breaker (Resilience4j), Saga Pattern
Operating System	Linux, Windows
Java Tools	Maven, JUnit, Mockito, JaCoCo, SonarQube, Swagger
AI & Developer Productivity	GitHub Copilot, Claude Code, AI-Assisted Development
Testing & Monitoring	JMeter, SLF4J, Log4j2, EFK Stack, OpenTelemetry (OTLP), Structured Logging, Distributed Tracing
DevOps Tools	Docker, Kubernetes, Jenkins, Git, GitHub
Cloud Tools	AWS(EC2, RDS, S3, IAM)

WORK EXPERIENCE

Software Engineer — DLV Software Pvt. Ltd., Hyderabad (Nov 2022 – Present)

- Developed scalable microservices-based backend applications using **Java 8, Spring Boot, and Spring Cloud**.
- Designed and implemented **RESTful APIs** for core modules such as Product, Order, and Payment services in an eCommerce platform.
- Implemented inter-service communication using **Feign Client** and service discovery with **Eureka**.
- Integrated **Razorpay payment gateway** and implemented notification services using **JavaMail API** and **WATI API**.
- Built database interactions using **Spring Data JPA with MySQL** and ensured code quality using **JUnit, Mockito, and SonarQube**.

PROJECTS

eCommerce Web Application

DLV Software Pvt. Ltd.

Environment:

Java 1.8, Spring Boot, Spring Data JPA, Spring REST API, Microservices (Feign Client), MySQL, ReactJS, Docker, Razorpay, JUnit, Mockito

Project Description:

Designed and developed a full-stack eCommerce platform that enables users to browse products, manage shopping carts, place orders, complete secure payments, and receive real-time order notifications. The system supports product catalog management, secure checkout workflows, payment gateway integration, and live order status tracking. The architecture follows a microservices-based design to ensure scalability, modularity, and maintainability.

Key Features:

- **Product Management:** Implemented a product catalog with CRUD operations, category management, and efficient product retrieval.
- **Shopping Cart:** Developed a session-based shopping cart allowing users to add, update, and remove products dynamically.
- **Checkout & Payments:** Integrated the Razorpay payment gateway to enable secure and real-time payment transactions.
- **Order Processing:** Implemented order placement workflow with order status tracking and automated invoice generation.
- **Notifications:** Enabled automated email and SMS notifications for order confirmation, shipment updates, and transaction alerts.
- **Admin Dashboard:** Developed administrative features for managing users, products, orders, and viewing system analytics.

Roles and Responsibilities:

- Designed and developed scalable **RESTful APIs** for Product, Order, and Payment microservices using **Spring Boot**.
- Implemented modular service layers following clean architecture principles to ensure maintainability and scalability.
- Developed database models and optimized queries using **Spring Data JPA** with **MySQL**.
- Integrated third-party services including **Razorpay** for payments, **JavaMail API** for email notifications, and **WATI API** for WhatsApp messaging.
- Implemented structured logging using **Log4j/SLF4J** across microservices to improve log readability, troubleshooting, and operational monitoring.
- Added correlation ID propagation to enable end-to-end request tracking and enhanced observability across distributed services.
- Integrated **OpenTelemetry (OTLP)** for distributed tracing and monitoring of microservices-based applications.
- Performed production-level debugging and issue resolution using logs, traces, and monitoring tools.
- Developed and executed unit and integration tests using **JUnit** and **Mockito** to improve application reliability and test coverage.
- Resolved code quality issues identified by **SonarQube** and ensured adherence to clean coding standards.
- Containerized microservices using **Docker** to enable consistent deployment across development and testing environments.
- Leveraged AI-powered development tools (Claude Code, GitHub Copilot) for code analysis, debugging, refactoring, test case generation, and technical documentation, improving development productivity and code quality.
- Managed source code using **Git** and collaborated with the development team in an **Agile** environment through regular sprint cycles.

EDUCATION

- **B.Tech** – Velagapudi RamaKrishna Siddhartha Engineering College (VRSEC), JNTU Kakinada
